

Audio-Consumer Buying Guide

Setup and Connections

Setting up your new system involves more than just plugging in cables. Where you place the speakers, what types of connections and cables you use, and even the orientation of your room can drastically affect sound quality. Here are some practical tips for setting up your new audio system.

TOPIC	DETAILS										
Speaker Placement	To recreate the movie theater or concert hall experience at home, you will want to position your speakers just right.										
	<table border="1"> <thead> <tr> <th>Speaker</th> <th>Placement Tips</th> </tr> </thead> <tbody> <tr> <td>Front, left and right</td> <td> <ul style="list-style-type: none"> Place speakers symmetrically in room flanking video display if system is home theater For “mostly movie” systems, speakers should be spread at a 45° angle when viewed from main viewing/listening position Widen angle to 60° for “mostly music” system </td> </tr> <tr> <td>Center</td> <td> <ul style="list-style-type: none"> Place as close to the video display as possible (usually directly above or directly below screen) and facing listening position </td> </tr> <tr> <td>Surround</td> <td> <ul style="list-style-type: none"> For “mostly movie” systems: place surround speakers on or near side walls slightly behind main viewing/listening position and well above ear level - Do not point them directly at listening position For “mostly music” systems, place surround speakers so that they are approximately the same height as the front speakers and are pointing at the listening position </td> </tr> <tr> <td>Subwoofer</td> <td> <ul style="list-style-type: none"> Placing subwoofers in a corner gives the most but not necessarily the best bass Placing subwoofers along a wall gives less bass than placing them in a corner but the sound quality may be better Placing subwoofers towards the center of the room gives the least bass but often produces the most natural sound </td> </tr> </tbody> </table>	Speaker	Placement Tips	Front, left and right	<ul style="list-style-type: none"> Place speakers symmetrically in room flanking video display if system is home theater For “mostly movie” systems, speakers should be spread at a 45° angle when viewed from main viewing/listening position Widen angle to 60° for “mostly music” system 	Center	<ul style="list-style-type: none"> Place as close to the video display as possible (usually directly above or directly below screen) and facing listening position 	Surround	<ul style="list-style-type: none"> For “mostly movie” systems: place surround speakers on or near side walls slightly behind main viewing/listening position and well above ear level - Do not point them directly at listening position For “mostly music” systems, place surround speakers so that they are approximately the same height as the front speakers and are pointing at the listening position 	Subwoofer	<ul style="list-style-type: none"> Placing subwoofers in a corner gives the most but not necessarily the best bass Placing subwoofers along a wall gives less bass than placing them in a corner but the sound quality may be better Placing subwoofers towards the center of the room gives the least bass but often produces the most natural sound
	Speaker	Placement Tips									
	Front, left and right	<ul style="list-style-type: none"> Place speakers symmetrically in room flanking video display if system is home theater For “mostly movie” systems, speakers should be spread at a 45° angle when viewed from main viewing/listening position Widen angle to 60° for “mostly music” system 									
	Center	<ul style="list-style-type: none"> Place as close to the video display as possible (usually directly above or directly below screen) and facing listening position 									
	Surround	<ul style="list-style-type: none"> For “mostly movie” systems: place surround speakers on or near side walls slightly behind main viewing/listening position and well above ear level - Do not point them directly at listening position For “mostly music” systems, place surround speakers so that they are approximately the same height as the front speakers and are pointing at the listening position 									
Subwoofer	<ul style="list-style-type: none"> Placing subwoofers in a corner gives the most but not necessarily the best bass Placing subwoofers along a wall gives less bass than placing them in a corner but the sound quality may be better Placing subwoofers towards the center of the room gives the least bass but often produces the most natural sound 										
How Your Room Affects Sound	Certain characteristics of your room will affect how your system sounds. Consider these factors as you create your listening space.										
	<table border="1"> <thead> <tr> <th>Factor</th> <th>Solution</th> </tr> </thead> <tbody> <tr> <td>Echo</td> <td>Strike a balance – leave some reflective surfaces to avoid “stuffed in the coat closet” sensation but add some absorbency as necessary to avoid echoes.</td> </tr> <tr> <td>Reflections</td> <td>Break up large, flat expanses (particularly on side walls of viewing/listening area) with furniture, like bookcases, wall hangings or any irregular shaped objects.</td> </tr> <tr> <td>Dimensions</td> <td>Rectangular rooms work better than square or cubical rooms. Changing speaker location and/or main viewing/listening position will change perceived sound quality. Experiment with speaker placement.</td> </tr> </tbody> </table>	Factor	Solution	Echo	Strike a balance – leave some reflective surfaces to avoid “stuffed in the coat closet” sensation but add some absorbency as necessary to avoid echoes.	Reflections	Break up large, flat expanses (particularly on side walls of viewing/listening area) with furniture, like bookcases, wall hangings or any irregular shaped objects.	Dimensions	Rectangular rooms work better than square or cubical rooms. Changing speaker location and/or main viewing/listening position will change perceived sound quality. Experiment with speaker placement.		
	Factor	Solution									
	Echo	Strike a balance – leave some reflective surfaces to avoid “stuffed in the coat closet” sensation but add some absorbency as necessary to avoid echoes.									
Reflections	Break up large, flat expanses (particularly on side walls of viewing/listening area) with furniture, like bookcases, wall hangings or any irregular shaped objects.										
Dimensions	Rectangular rooms work better than square or cubical rooms. Changing speaker location and/or main viewing/listening position will change perceived sound quality. Experiment with speaker placement.
